

Sending a categorized email (.msg)

Overview

Step 1 Get upload URL

POST `https://tidystack-app.vercel.app/api/send-msg-file/get-upload-url`

Content-Type: application/json

Body: messageId, category, secret

```
{ "messageId": "AAMkAG...", "category": "HubSpot deal",  
  "secret": "<shared-secret>" }
```

Response (200) when registered:

```
{ "uploadUrl": "<presigned-url>", "pathname": "msg/<messageId>.msg",  
  "registeredCategory": true }
```

If `registeredCategory` is false, stop here — do not upload or call process.
(HTTP 200 with message: "This category is not registered.")

Step 2 Upload the .msg file

PUT the `uploadUrl` returned from step 1 (not the API base URL).

- **Body** Raw .msg file bytes
- **Content-Type** application/vnd.ms-outlook (or application/octet-stream)
- **Limits** Max 100 MB. Complete upload within 15 minutes of step 1.

Only continue to step 3 if the PUT returns HTTP 200.

Step 3 Process

POST `https://tidystack-app.vercel.app/api/send-msg-file/process`

Content-Type: application/json

Request body (JSON):

- **pathname** Value from step 1 response (e.g. msg/AAMkAG....msg)
- **category** "HubSpot deal"

- **secret** Plugin shared secret
- **triggeredBy** (Optional) User or mailbox id for logging

messageId is not required here — use pathname from step 1.

Example request:

```
{
  "pathname": "msg/AAMkAG...msg",
  "category": "HubSpot deal",
  "secret": "<shared-secret>"
}
```

Sample success response (HubSpot deal, HTTP 200):

```
{
  "success": true,
  "passengerName": "Jane Smith",
  "departureAirport": "JFK",
  "arrivalAirport": "LHR",
  "dealId": "123456789",
  "dealName": "Jane Smith JFK LHR 2026-08-01/2026-08-15",
  "registeredCategory": true
}
```

Additional booking/deal fields may be present.

Common errors

- **401** Wrong or missing secret
- **400** Invalid JSON, bad messageId/pathname, or invalid .msg
- **404** .msg not uploaded yet (step 2 missing or failed)
- **500** Server or downstream processing failure

Error bodies include error and details fields.
